

# Defense Technology Foundation

Defense Technology Foundation (DTF) was established as a general foundation for treating defense and security technology for supporting Japanese Government, especially the Japan Ministry of Defense (JMOD).

## Mission

Investigation on the research & development of the defense technology.

Cooperation with and assistance to the government and private sectors in improving their defense technology.

Building up and strengthening the defense technological bases of our country.

Increasing awareness of the importance of national defense.

# Research and Technology

- ❖ Research and investigation on defense technology under contract with JMOD, Cabinet Office, Ministry of Economy, Trade and Industry (METI), Keidanren (Japan Business Federation), etc., supported by visiting researchers including retired high rank officers of JMOD.
- ❖ Six research committee for in-house research on advanced defense technology. Each committee is constituted by the members of private sectors in defense related industry.

# “Defense Technology Journal” – monthly publication

Publishing articles on defense technology, research and development to promote increase of the awareness of the importance of national defense.

## Conference / Technical Meeting

Conferences and technical meetings are held under cooperation with and assistance to the government and private sectors.

## International Defense & Security Exhibition

DTF promotes the operation and support for Japan Pavilion at International Defense and Security Exhibitions to provide opportunities to get in touch with state-of-the-art technology from the private sectors of our country and to contribute to discovering business opportunities abroad.
